ALPHABETICAL INDEX

OF

STIELER'S ATLAS OF MODERN GEOGRAPHY

TENTH *(CENTENARY)* EDITION

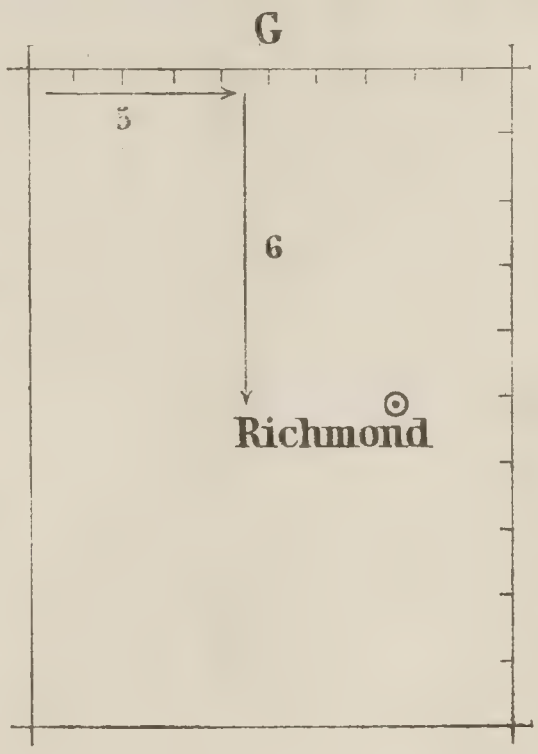
1925

GOTHA: JUSTUS P

This index is a complete list of the names given in the atlas, and is intended to facilitate the finding of these names on the maps. The names are arranged alphabetically, letters with accents or other linguistic signs being treated as plain letters. Thus ä, â, ã, á, à, č, ć, ç, ł, ñ, ø = a, c, l, n, o. Names without special description are those of towns or villages, all others being distinguished by one or other of the abbreviations explained below. Where several places have the same name, some indication of their geographical position is given.

Example: Richmond 37, G 4, 5/6

The first number after a name is that of the map, Nk. or a letter enclosed in a circle, thus ⊙, indicatine an inset-map. The letter and number which follow refer to the degree trapezium in which the name may be found. The position of its initial letter within the trapezium is indicated by the two remaining figures, the first giving tenths of the upper parallel reckoning from west to east, the second tenths of the meridian from north to south.



An example will make this clear: Richmond 37, G 4, 5/6, informs us that Richmond is to be found on Map No. 37, in the trapezium indicated by letter G (upper margin) and number 4 (rigthhand margin). If within that trapezium we count 5 tenths from left to right, and 6 tenths from top to bottom, we shall find R, the initial letter of the name. The NW, NE, SW, and SE corners of the trapezium are therefore indicated by 1/1, 1/10, 10/1 and 10/10 respectively, while 5/5 refers to the middle.
